1.0 SCOPE

Repair and rehabilitation of shot crete walls

2.0 REFERENCE

- Contract Specifications
- All related codes and standards referenced in the Contract specifications
- Contract drawings
- Approved Shop Drawings and Sketches
- Approved Material Submittals
- Program of works
- Approved project safety plan and procedures

3.0 HEALTH AND SAFETY HAZARDS

Specific safety measures have to followed as applicable, and all the safety measures are covered separately in the Project Safety Plan.

4.0 DEFINITIONS

- xxxxx - (Consultant)
- xxxxx - (Main Contractor)
- xxxxx - (Subcontractor)
- MS - Method Statement
- ITP - Inspection & Test Plan

5.0 RESPONSIBILITIES

- Preparation of Procedure - Construction Manager
- Preparation of Procedure - Technical Manager
- Review of Procedure - MEP Manager
- Review of Procedure - QA/QC Manager
- Review of Procedure - Safety Manager
- Approval of Procedure - Project Manager
- Implementation - As described in the procedure

| | | |
|--|---|---|
| | Method Statement of..... | Document No: Revision No: 00 Date : Page No : Page 4 of 10 |
|--|---|---|

The Construction Manager will be responsible for over all execution of project activities

The QA/QC Engineer will be responsible for all inspections and approvals related to project

The Site Engineer will be responsible for daily work planning and execution

The Safety Engineer will be responsible for job site and employee safety

6.0 PROCEDURE / METHOD TO BE EMPLOYED

Procedure

Pre-Work Inspection and Preparation:

Inspect the damaged area to determine the extent of repair required.

Mark the repair boundaries clearly.

Ensure all necessary permits and approvals are in place.

Surface Preparation:

Remove all loose, damaged, or deteriorated concrete using a chipping hammer or other suitable tools.

Clean the surface thoroughly to remove dust, grease, or any contaminants using compressed air or water jetting.

Ensure the exposed reinforcement is free from rust. Use a wire brush or sandblasting to clean rusted steel.

Apply an approved bonding agent to the prepared surface if required.

Steel Mesh Installation:

Cut and shape the steel mesh to fit the repair area.

Fix the mesh to the wall using anchors or fasteners at appropriate intervals as per design specifications.

Ensure the mesh is securely fastened and positioned at the correct cover depth.

Application of Repair Material:

Mix the repair mortar or shotcrete material as per the manufacturer's instructions.

| | | |
|--|---|---|
| | Method Statement of..... | Document No: Revision No: 00 Date : Page No : Page 5 of 10 |
|--|---|---|

Apply the material using shotcrete equipment or manually in layers.

Start from the bottom and move upwards for vertical walls.

Ensure even distribution and compaction of the material.

Smooth and finish the surface with trowels or other tools as required.

Curing:

Apply a curing compound or cover the repaired area with wet hessian or plastic sheets.

Maintain curing for the specified duration to achieve optimal strength and durability.

Final Inspection:

Inspect the repaired area for uniformity, alignment, and adherence to design specifications.

Record the repair details and ensure approval from the quality control team.

Safety Precautions

Ensure all workers use appropriate PPE, including helmets, gloves, goggles, and safety harnesses for working at heights.

Use scaffolding or platforms that meet safety standards.

Follow safe handling procedures for materials and equipment.

Maintain a clean and organized worksite to prevent accidents.

Quality Assurance

Ensure all materials meet project specifications and have been approved by the engineer.

Document and report any deviations or issues during the repair process.

|--|---|---|

8.0 MATERIAL REQUIREMENTS

Steel mesh (galvanized or as per project specifications)
 Repair mortar or shotcrete mix (pre-approved by the engineer)
 Anchors and fasteners for mesh installation
 Bonding agent (epoxy or cementitious as specified) and Curing compound

9.0 EQUIPMENT

Power tools (grinders, chipping hammers, etc.)
 Air compressor
 Shotcrete equipment
 Trowels and finishing tools
 Measuring tools (levels, plumb lines, etc.)
 Scaffolding or mobile platforms
 Personal Protective Equipment (PPE)

10.0 TEST REPORT

(If applicable, otherwise NIL)

11.0 HEALTH AND SAFETY PROVISIONS

All the safe practices will be adopted during the ongoing works.
 All the working platforms will be inspected by Site Safety Engineer
 All necessary personal protective equipment shall be used.
 Proper access for the labours and equipment will be provided to the place of works.

12.0 QC APPROVALS AND OTHER DOCUMENTS

Project Specific Quality Plan shall be approved
 Project HSE Plan
 Calibration certificates for equipment and instruments
 Confirmation of material sources

13.0 RECORDS TO BE PRODUCED

Inspection & Testing Request
 (ITR) Checklist

| | | |
|--|-------------------------------------|---|
| | Method Statement of..... | Document No: Revision No: 00 Date : Page No : Page 7 of 10 |
|--|-------------------------------------|---|

14.0 DISTRIBUTION

Copies of this method statement shall be issued to the following for implementation.

Construction Manager

Project Engineer

HSE Engineer.

QA/QC Engineer.

15.0 SITE SAFETY INCHARGE APPROVAL

Approved

Approved Subjected to compliance with the following notes/comments

Not Approved - Reasons

(HSE to sign here)

Name & Signature Date

16.0 RISK ASSESSMENT & CONTROL MEASURES

17.0 Risk Assessment

| LIKELIHOOD | I M P A C T | | | | |
|---------------|-------------|---------|----------|-------------|--------|
| | Negligible | Minor | Moderate | Significant | Severe |
| Very Likely | Low Med | Medium | Med Hi | High | High |
| Likely | Low | Low Med | Medium | Med Hi | High |
| Possible | Low | Low Med | Medium | Med Hi | Med Hi |
| Unlikely | Low | Low Med | Low Med | Medium | Med Hi |
| Very Unlikely | Low | Low | Low Med | Medium | Medium |

18.0 ENVIRONMENTAL ASPECT , IMPACT & CONTROL MEASURES

| Repair Method | Material Use | Energy Consumption | Carbon Emissions | Waste Generation | Water Pollution | Air Pollution | Ecological Impact |
|----------------------------|--|---------------------|------------------|-----------------------|----------------------------|------------------------|-------------------------------|
| Crack Injection | Epoxy or polyurethane resins | Moderate | Moderate | Low | Possible chemical leaching | VOC emissions | Minimal |
| Patch Repair | Cementitious or polymer-based mortars | Moderate to high | Moderate to high | Moderate | Cement-based runoff | Dust from cement | Habitat disruption |
| Concrete Overlay | New concrete layer | High | High | High | Cement wash-off | Dust & CO ₂ | Land use impact |
| Cathodic Protection | Metal anodes, electrical systems | High (installation) | Moderate | Moderate | Possible metal leaching | Minimal | Long-term durability benefits |
| Surface Coatings | Polymer, silicate, or acrylic coatings | Moderate | Moderate | Low | Chemical leaching risk | VOC emissions | Minimal |
| Hydrodemolition | High-pressure water removal | High | High (equipment) | High (debris, slurry) | High (alkaline runoff) | Minimal | Water resource consumption |

| | | Method Statement of..... | | | Document No: Revision No: 00 Date : Page No : Page 9 of 10 | | |
|--|----------------------------------|-------------------------------------|----------|----------|---|---------------|------------------------------|
| Carbonation Control | Anti-carbonation coatings | Moderate | Moderate | Low | Minimal | VOC emissions | Extended concrete lifespan |
| Realkalization | Chemical treatment to restore pH | Moderate | Moderate | Low | Possible chemical leaching | Minimal | Minimal |
| Electrochemical Chloride Extraction | Chemical & electrical process | High | High | Moderate | Possible runoff | Minimal | Improved structure longevity |

Inspection and test plan

| Activity | Inspection/Test Method | Acceptance Criteria | Frequency | Responsible Party |
|---|--|--|-------------------------------|---------------------------------|
| 1. Pre-Repair Inspection | Visual inspection of damaged areas | Identify cracks, spalling, voids, and delaminations | Before repair | QA/QC Inspector, Engineer |
| 2. Surface Preparation | Visual & tactile inspection | Surface roughened, clean, free of contaminants | Before shotcrete application | Contractor, QA/QC Inspector |
| 3. Moisture Condition Check | Moisture meter / Spray test | Surface damp, no standing water | Before shotcrete application | QA/QC Inspector |
| 4. Shotcrete Material Verification | Review of mix design, batch ticket check | Mix complies with design requirements | Each batch | QA/QC Inspector, Lab Technician |
| 5. Shotcrete Application | Visual observation | Uniform placement, proper nozzle distance maintained | Continuous during application | Contractor, QA/QC Inspector |

| | | Method Statement of..... | Document No: Revision No: 00 Date : Page No : Page 10 of 10 | |
|---|--------------------------------------|---|--|------------------------------|
| 6. Shotcrete Thickness Check | Depth gauge / Core sampling | Thickness per design drawings \pm tolerance | Random locations | QA/QC Inspector |
| 7. Compressive Strength Test | Cylinder or core testing | Meets specified strength (e.g., 28-day strength) | 3, 7, 28 days | Testing Lab, QA/QC Inspector |
| 8. Curing Process | Visual inspection / Wet curing check | Proper curing method applied (e.g., moisture retention) | Daily during curing | QA/QC Inspector |
| 9. Final Surface Finish Inspection | Visual check | Surface finish as per project specification | After curing | QA/QC Inspector, Engineer |
| 10. Bonding Test (if required) | Pull-off test | Minimum bond strength as per design | As specified in contract | QA/QC Inspector, Testing Lab |
| 11. Final Acceptance Inspection | Walkthrough inspection with client | No defects, uniform finish, meets project specs | After all tests | Engineer, QA/QC, Client Rep |
